TRADITIONAL MFA IS NOT ENOUGH

Ditch antiquated credentials. Go Passwordless with BioThenticate®

BioThenticate® is a next-generation passwordless multi-factor authentication (MFA) solution employing multimodal biometrics, advanced device metrics and user behavior to provide secure, frictionless authentication to any user in any use case.

Rethink Authentication in the Era of Zero Trust

BioThenticate® integrates seamlessly with your current cybersecurity ecosystem, including Identity and Access Management (IAM), network resources, and critical SaaS and on-prem applications to continually validate identity and enforce a least-privilege model to your access control.

Why Passwordless?

▶ **In 2023, 86% of breaches involved stolen credentials.**
- Google Cloud

▶ **Credential-related breaches took 88 days (37%) longer to resolve than any other.**
- Varonis

▶ **Passwordless authentication is 70% faster and 15% more reliable than traditional MFA.**
- FIDO Alliance

BIOTHENTICATE PROVIDES

Multimodal Biometric Authentication

Secure Identity Component for Zero Trust

Passwordless Authentication

Secure Privileged Remote Access
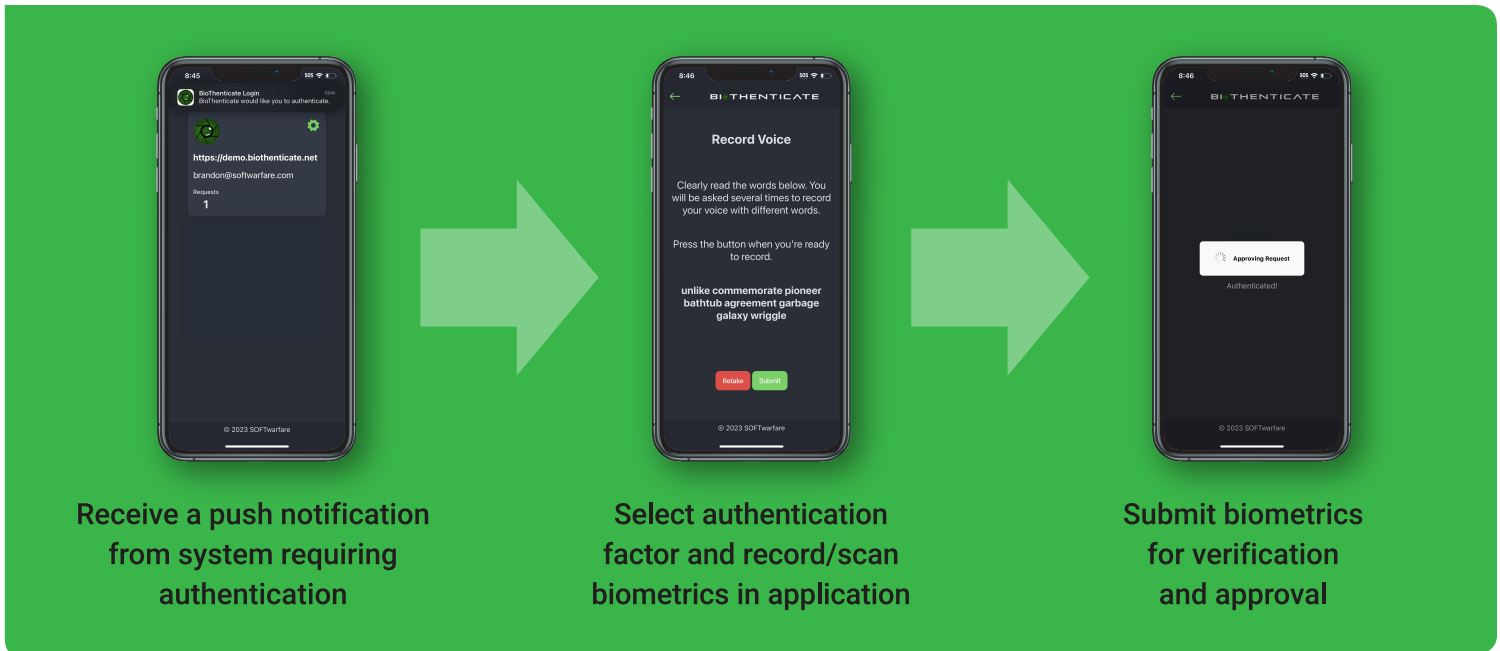

Step-Up Authentication

Established Trust for Each Identity

HOW BIOTHENTICATE® WORKS

Receive a push notification from system requiring authentication

Select authentication factor and record/scan biometrics in application

Submit biometrics for verification and approval

It's Time to Rethink Authentication.

Cyber attacks are constantly becoming more sophisticated in nature, making it easier than ever for even unskilled bad-actors to bypass traditional MFA. BioThenticate® adds layers of security with biometrics, device intelligence and user behavior data to keep your users and systems out of harms way.

System agnostic and complementary to your existing access management and MFA solutions, BioThenticate® allows you to deploy world-class identity security quickly and seamlessly onto your existing stack – without having to rip and replace.
