

Your Trusted Partner for **CMMC 2.0**

CMMC-as-a-Service for Defense Industrial Base

As the Department of Defense (DoD) prepares to implement the updated Cybersecurity Maturity Model Certification (CMMC) 2.0, organizations within the Defense Industrial Base (DIB) are facing increasingly rigorous cybersecurity requirements. Compliance with NIST regulations, which underpin CMMC 2.0, **is not optional**—it's essential for protecting Controlled Unclassified Information (CUI), protecting our national security, **and maintaining your valuable DoD contracts**.

SOFTware is a leader in the DIB, offering cutting-edge, multimodal biometric multi-factor authentication (MFA) solutions that seamlessly align with these enhanced requirements. By partnering with SOFTware, your organization can stay ahead of regulatory demands and fortify its defense against evolving threats.

Meet and Exceed CMMC 2.0 Authentication Requirements with SOFTware

CMMC 2.0 enhances the focus on NIST SP 800-171 and other critical cybersecurity frameworks, emphasizing the need for robust authentication methods to prevent unauthorized access. SOFTware's advanced biometric MFA solutions are engineered to not just meet but exceed these authentication mandates.

Our technology provides a layered security approach, combining:

Biometric Authentication

Fingerprint, facial recognition, and other biometric factors that are unique and difficult to replicate.

Behavioral Analysis

Continuous monitoring of user behavior to detect anomalies that could indicate unauthorized access.

Real-Time Contextual Analysis

Evaluating the context of each access attempt, such as location, device, and time, to prevent potential threats.

By combining these cutting-edge methods, SOFTware ensures your organization surpasses the NIST standards set under CMMC 2.0, delivering unparalleled security for your mission-critical systems.

**Defend Your
Assets Against
Cyber Attack®**

SOFTware® is an American-owned and operated manufacturer of industry-leading cybersecurity software. Specializing in high- security authentication and innovative passwordless solutions, SOFTware is at the forefront of the increasingly critical cybersecurity identity market. SOFTware solutions secure leading commercial, private, and public institutions across industries, including manufacturing, technology, and critical infrastructure, as well as branches of the U.S. Armed Forces and the Defense Industrial Base.

A Proven CMMC Partner

As a trusted RPO (Registered Provider Organization) for CMMC and soon-to-be C3PAO (Certified Third-Party Assessor Organization) for CMMC 2.0, SOFTwarfare is uniquely positioned to guide your organization through the evolving landscape of cybersecurity compliance. Our deep experience in working with the DoD and DIB clients ensures that we understand the intricacies of your cybersecurity needs and can tailor solutions to meet them effectively.

Tailored Solutions for Organizations of All Sizes

Whether you are a global defense contractor or a small business in the DIB, SOFTwarfare offers scalable solutions designed to fit your exact needs:

For Large Enterprises: We provide customizable, enterprise-grade integrations that meet the sophisticated security demands of multi-location operations.

For Medium-Sized Businesses: Our flexible solutions ensure robust security with minimal disruption to existing IT infrastructures.

For Small Businesses: Cost-effective and resource-efficient, our solutions deliver high levels of security without requiring extensive IT investment, making CMMC compliance achievable at any scale.

Why Choose SOFTwarfare?

- **Trusted DoD Partner:** Nearly a decade of experience supporting the DoD and DIB ensures we fully understand the challenges you face.
- **Proven Expertise:** With our experience as an RPO and soon-to-be C3PAO, we're a trusted partner on the journey to CMMC compliance.
- **Innovative Technology:** Our multimodal biometric MFA leads the industry in security innovation, offering unmatched protection from modern cybersecurity threats.
- **Comprehensive and Scalable Solutions:** From initial consultation through ongoing support, our solutions are designed to keep your organization compliant with the DoD's evolving security requirements while seamlessly integrating and scaling to meet the needs of specialized units and global enterprises alike.

Secure Your Future with SOFTwarfare

With the implementation of CMMC 2.0, securing your organization's systems is not only about meeting standards—it's about protecting your future success. SOFTwarfare's advanced biometric MFA solutions provide the highest levels of protection, ensuring you remain compliant and competitive as a trusted partner to the DoD.

Ready to Elevate Your Security?

Contact SOFTwarfare today at dibnet@softwarfare.com to learn how we can help your organization achieve and exceed CMMC 2.0 compliance and safeguard your operations from tomorrow's threats.
