

### WHO WE ARE

SOFTware® is an American-owned and operated manufacturer of industry-leading cybersecurity software. Specializing in high-security authentication and innovative passwordless solutions, SOFTware is at the forefront of the increasingly critical cybersecurity identity market. SOFTware solutions secure leading commercial, private, and public institutions across industries, including manufacturing, technology, and critical infrastructure, as well as branches of the US Armed Forces and the Defense Industrial Base.

### WHAT WE DO

#### Authentication

Adaptive & Continuous MFA  
Biometric MFA  
Device Validation  
Least Privileged Access  
Passwordless Authentication

#### Regulatory Compliance

SOFTware solutions help companies meet authentication requirements from NIST, CMMC, FedRAMP, NERC CIP, cyber insurance, and more.

#### Integration

API Integration & Security  
IAM Integration  
Legacy System Integration  
System & Application Integration

#### Authentication & Identity Risk Management

SOFTware applies user behavior analytics and machine learning to address authentication risks.

### SOLUTIONS

#### BioThenticate®

Multimodal biometric authentication with continuous identity verification & security.

#### PangaeAPI®

Identity iPaaS securely integrates with IAM applications and best-of-breed solutions to inform all authentications.

#### Zero Trust Identity®

Establishes identity & device security for a Zero Trust architecture.

#### Trusted Passwordless®

Continuous identity & device authentication & security without passwords.

### CAPABILITIES

- Adaptive Authentication
- Advanced Biometric Authentication
- Cloud, On-Prem & Hybrid Deployment
- Context-Aware Authentication
- Device Endpoint Validation
- Dynamic Risk Scoring
- Edge Device Protection
- Enterprise Network MFA
- Frictionless MFA User Experience
- Human Intelligence
- Passwordless Authentication
- Proximity-Based Authentication
- Risk-Based Access Control
- Secure Privileged Remote Access
- Session-Based Micro-Segmentation
- Single Sign-On
- Telemetry Data Integration
- User-Friendly Design
- Zero Trust Security

### SAMPLE INTEGRATIONS

## WHY SOFTWARFARE?

SOFTwarfare secures authentication in your enterprise and builds trust on a per-session basis for user and machine identities. Fully deployed and integrated within your existing infrastructure, SOFTwarfare products modernize and secure your authentication and integration architecture to meet next-generation requirements for zero trust, CMMC, and other regulatory compliance.

## OUR APPROACH

**Security Centric:** We incorporate authentication, device and human risk intelligence into access governance. This comprehensive and contextual view allows organizations to implement defensive measures against risky behaviors that create and exploit security gaps.

**Data Centric:** Our advanced, real-time, data-driven approach to digital identity management, security and risk empowers organizations to balance user access while proactively guarding against security threats.

**Forward Thinking:** With multiple patents, our technology is the leader in advancing identity security while providing a seamless and passwordless end-user experience.

## BENEFITS

**Comprehensive & Advanced Authentication:** Utilize a wide array of identity attributes extending to user and device identities for robust, flexible, ongoing authentication with a seamless user experience.

**Enhanced Risk Management:** Assess identity risk across the entire enterprise landscape and capture human intelligence to create a more comprehensive and complete view of risk. Incorporate these elements into your overall risk management and security strategies to increase resiliency.

**High-Security Adaptability:** We specialize in environments that demand uncompromising security but can't afford user friction. Whether air gapped or fully connected, our architecture secures the entire workforce and scales with you as you grow. Built with future-proofing in mind, it also allows for quick integration of new identity and security technologies as they emerge.

**Ecosystem Synergy:** Our products don't just integrate; they enhance existing systems, providing a cost-effective way to increase security while maximizing the value of existing security infrastructure investments.

**User Friendly Design:** Our solutions prioritize ease of use, ensuring a smooth transition for users to passwordless authentication.

## MARKETS SERVED

- Aerospace
- Education
- Energy & Utilities
- Federal, State & Local Government
- Financial Services
- Healthcare
- Leisure & Hospitality
- Manufacturing
- Military & Defense
- Professional Services
- Retail
- Telecommunications
- Transportation & Logistics
